

Appian Project Lead

Remote | United States

Are you looking to leverage your Appian skills in an innovative, flexible working environment? As a **NAVLABS** Appian Project Lead, you'll lead teams developing web-based applications on the Appian platform to help our clients execute on their business strategies. From leading the first business application into production to scaling the program across the enterprise, you will be responsible for driving our clients' digital transformation.

About NAVLABS

We're a boutique consultancy that builds apps for Fortune 500 firms utilizing the Appian platform. We're obsessed with two things: creating enormous value for our clients and cultivating a company full of super-happy employees. We strive to hire the best and brightest employees and maintain a culture of candor where the best idea wins.

About You

You're an expert on the Appian platform

You've demonstrated past success in leading cross-functional teams building Appian solutions using agile methodologies.

You recognize that the team's success is your success, so you love coaching and mentoring junior team members

You're smart, curious, and love problem solving

You are engaged: you listen to our clients, understand problems, and dedicate your time to solving them

You enjoy working with clients to define business processes and gather functional system requirements. You are not an order taker; you ask tough questions and solve the right problems

You're passionate about technology: Modern Responsive Web Applications, Mobile-First Solutions, Composite applications, etc.

You have excellent communication skills

It would be nice if...

You are comfortable with object-oriented languages like Java, JavaScript, .Net, etc
